Geomagnetic Compensation in Hyper-Kamiokande

lunes, 6 de mayo de 2024 17:50 (15 actas)

Hyper-Kamiokande is a large-scale international neutrino detection project established in Japan. In this talk I will be discussing the work of the last two years on the design of the detector's geomagnetic field compensation system, the studies, conclusions and problems derived, as well as the presentation of the final, recently agreed design.
